

(2004)

The performance of the treefarm has exceeded expectations with less than 1,000kg nitrogen and less than 50kg phosphorus exported from the site annually to date. The data plot below shows the average nitrogen concentration through the treatment process.

Albany Wastewater Treatment System - Total Nitrogen

The Water Corporation is proud of the success of the Albany Treefarm and continues to develop innovative and best practice wastewater management systems with investigations progressing for an expansion to the treefarm.
